DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to a take-up roller system for winding web material having beads of adhesive thereon, classified in class 242, subclass 536.
 - II. Claims 10-14, drawn to a laminating apparatus, classified in class 156, subclass 446
 - III. Claims 15-34, drawn to a laminating system, classified in class 156, subclass 583.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as for winding materials of non-planar shape for storage purposes. Invention II has separate utility such as in a tire fabric manufacturing plant using a different type of lamination adhesive and invention III has separate utility such as in a laminating system for webs not supplied from rolls of material. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications, and because the searches for the various groups are not coextensive, restriction for examination purposes as indicated is proper.

Art Unit: 3654

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
